 Öko-Energie Umweltfonds 1 GmbH & Co. KG

The idea behind the fund

Energy from yoghurt pots

Öko-Energie Umweltfonds 1 GmbH & Co. KG

As a participator in the Öko-Energie Umweltfonds 1 GmbH & Co. KG, you will participate in new yet tried and tested recycling technology. This technology transforms plastics and used oils into marketable product oil complying with DIN standards, comparable with light heating oil. This planned SYNTROL® plant will be the first of its kind in Germany.

By means of SYNTROL® thermolysis, **100 kg of plastic waste** is transformed into **85 l of product oil** complying with DIN standards, comparable with light heating oil.

The production site

The Fund will authorize the Operating Company to order, install and commission four SYNTROL® plants at the planned production site at Rheinau-Hafen in the city of Mannheim.

A summary of the characteristics

Opportunities for investors

- The investors in the fund will participate in the increase in the prices of crude oil and gasoil on the world markets.
- The price of the product oil manufactured (complying with DIN standards), which is comparable with heating oil, when sold may be below the prevailing sale price of heating oil even after including the yield. (2 eurocents per litre below the market price). This means that demand is guaranteed.
- The product oil that is obtained is a consumable material that, thanks to its universal properties, is extremely marketable.
- Attractive, conservative yields through ecologically intelligent recycling.
- An attractive, profitable investment with continuous quarterly payouts of dividends of more than 12 % p. a. according to conservative forecasts.
- The planned quarterly payout of dividends provides a continuous inflow of liquidity.
